781-361-0460 | contact@dave-parisi.com

Skills

Languages: Python, JavaScript, TypeScript, SQL

Frontend: React, React Native, Responsive Design, Dynamic UI

Backend: Flask, FastAPI, REST APIs, MySQL, Convex

Tools & Practices: Git, CI/CD, Data Modeling, API Integration, Debugging & Testing

Education

Merrimack College

May 2026

Master of Science in Computer Science, Concentration in Software Engineering

3.9 GPA

Bridgewater State University

May 2018

Bachelor of Science in Biology

Projects

TermiDex

React, FastAPI, Python, REST APIs, Render

- Developed a full-stack video game-inspired collection management platform using React and FastAPI, enabling users to search, track, and manage digital collections through a custom backend
- Designed and implemented REST API endpoints to support CRUD operations, external API integration, and communication between frontend and backend services
- Built reusable React components with dynamic rendering of high-resolution assets, metadata, and collection data
- Integrated third-party APIs to retrieve external data and transform responses into application-ready formats
- Deployed the application using Render, configuring production environments and managing application hosting

Fitness Generator

React, FastAPI, Python, REST APIs, Render, MySQL

- Developed a full-stack fitness application using React and FastAPI that generates personalized workout plans based on user goals, equipment, and configurable training parameters
- Designed and implemented REST API endpoints supporting workout generation, exercise management, and frontend-backend communication.
- Built a relational MySQL database to manage exercise libraries, user preferences, and application data
- Implemented a full CRUD exercise management system enabling users to create, edit, organize, and manage custom exercises

Project DoodleDash

React Native, Expo, TypeScript, Convex, Zustand, TanStack Router, OpenAI

- Collaborated with a team of developers to build a cross-platform mobile party game using React Native and Expo with a scalable TypeScript codebase
- Integrated OpenAI APIs to generate dynamic game content and enhance interactive user experiences
- Developed reusable React Native components including navigation, state management, QR code functionality, and secure session persistence using Expo Secure Store

Professional Experience

Graduate Peer Tutor

Feb 2026 - May 2026

Merrimack College

North Andover, MA

- Supported graduate Computer Science students in Python, SQL, software engineering and application development
- Provided individualized technical guidance on debugging, algorithmic problem-solving, object-oriented programming, and software architecture
- Assisted students in designing, implementing, and troubleshooting software projects across multiple stages of the development lifecycle
- Explained software engineering concepts, design patterns, and programming fundamentals to students with varying levels of technical experience

Documentation Manager

Jan 2023 - Feb 2026

Cambridge Isotope Laboratories

Andover, MA

- Managed SQL-driven data integrity workflows supporting 12,000+ products and Microsoft Dynamics D365 integrations
- Conducted functional API regression testing across 15 – 20 business processes, identifying defects and improving system reliability
- Led an 8-person team while implementing process improvements that reduced operating costs by over \$45,000 annually
